

Zero to Hero : Docker For Developers

Image - Static files on disk

Container - Live instance of the image

Port mapping -p 80:80  
port outside Container      port inside Container

Run detached -d

Be explicit with version in production  
- avoid latest tag

Multi-stage build files allow you  
to build and publish but use a  
light weight base layer to run it.

Bind mounts allow you to have directory  
not in container appear as if it is.

Network Types

Bridge

Overlay

Host

IPvlan

Macvlan

None

Entry point vs CMD

CMD lets you run w/ arguments provided
